Hexagon Esprit Edge Addins

The Hexagon Esprit Edge Addins are extensions for ESPRIT EDGE that simplify frequent design and programming tasks. All add-ins appear in ESPRIT on the shared ribbon tab **EEAddins**. They are installed with one common installation package, in which every add-in can be selected as a feature of its own.

Add-ins

Add-in	Function	Documentation
Undercut	Inserts undercuts to DIN 509 (forms E, F, G, H) and thread undercuts to DIN 76-1 (forms A, B, C, D) into turning profiles – at one corner or at all inner corners of a contour, optionally as a contour of its own for a separate tool.	Undercut (EN).pdf

Requirements

- ESPRIT EDGE in a supported release. There is an installation package for each release; it can only be installed on the matching release.
- Supported releases: **ESPRIT EDGE 2026.3** and **2026.2**.
- Windows 64-bit, administrator rights for the installation.
- A valid ESPRIT EDGE licence. Individual add-ins may additionally require a paid licence; this is stated for the add-in concerned.

Installation

The installation packages are named

```
Hexagon Esprit Edge <release> Addins <version> DE.msi
Hexagon Esprit Edge <release> Addins <version> EN.msi
```

for example Hexagon Esprit Edge 2026.3 Addins 1.0.8 EN.msi. DE and EN only differ in the language of the installation wizard; the add-ins themselves follow the language of ESPRIT.

1. Close ESPRIT EDGE.
2. Double-click the package for the installed ESPRIT release.
3. Accept the licence terms, select the add-ins and install.
4. Start ESPRIT EDGE. If the **EEAddins** tab is missing, activate the extension under *File* > *Extensions*.

If the package does not match the installed ESPRIT release, the installation stops with a message naming both versions.

Silent installation

For distribution to several computers (command prompt as administrator):

```
msiexec /i "Hexagon Esprit Edge 2026.3 Addins 1.0.8 EN.msi" /qn /l*v install.log
```

Without further options all add-ins are installed.

Update

Simply install the new version, there is no need to uninstall first. The old version is replaced. After an ESPRIT update, install the package for the new release; it replaces the package of the old release. An older version cannot be installed over a newer one.

HEXAGON

Uninstall

Via *Settings* > *Apps* (Hexagon Esprit Edge <release> Addins) or with

```
msiexec /x "Hexagon Esprit Edge 2026.3 Addins 1.0.8 EN.msi"
```

Files on the computer

Folder	Content
C:\Users\Public\Documents\Hexagon\ESPRIT EDGE\Data\Extensions\<add-in>\	Program files of the add-ins; ESPRIT loads them from here.
C:\Users\Public\Documents\Hexagon\ESPRIT EDGE\Data\EEAddins\<add-in>\	User data, e.g. the house standard of the Undercut add-in. Kept on update and uninstall.
%APPDATA%\Hexagon\EEAddins\<add-in>\	Personal settings.

Documentation and release notes

Every add-in has its own documentation (PDF, German and English). The changes per version are listed in the release notes. Both are published together with the installation packages in the public GitHub repository https://github.com/hexagon-ps-support-service/esprit-edge-addins.

Terms of use

The add-ins are provided as is and are not part of the ESPRIT EDGE product maintenance. Check the generated geometry and the NC programs before using them in production. The installation wizard shows the complete terms of use.
